

Coolify Deployment — MarQira Pulse

Complete deployment guide for MarQira Pulse on Coolify.

Phase 3: Backend Infrastructure

See [PHASE_3_DEPLOYMENT.md](#) for complete, step-by-step instructions to deploy:

- PostgreSQL 16 (internal, private)
- Redis 7 (internal, private)
- Laravel API at `api.marqira.com`

The guide includes:

- Click-by-click Coolify UI instructions (beginner-friendly)
- Environment variable configuration
- Database migration steps
- Security verification tests
- Backup configuration

Future Phases

- Phase 5: React Dashboard at `app.marqira.com`
- Phase 7: Plugin Update Server at `updates.marqira.com`
- Phase 9: Origin Bypass Proxy at `proxy.marqira.com`

Quick Reference

Internal Service Names

```
PostgreSQL: marqira-postgres:5432
Redis:      marqira-redis:6379
API:        marqira-api:9000
```

External Endpoints

```
API:          https://api.marqira.com
Dashboard:    https://app.marqira.com (Phase 5)
Updates:      https://updates.marqira.com (Phase 7)
n8n:          https://n8n.marqira.com (already deployed)
```

Critical Security Rules

- PostgreSQL port 5432: **NEVER** publicly accessible
- Redis port 6379: **NEVER** publicly accessible
- All services communicate over internal Docker network
- External access **ONLY** via HTTPS through Nginx/Traefik
- APP_DEBUG=false in production

- Regular PostgreSQL backups to off-VPS storage
